With the function of fault self-check, automatically judge the fault and prompt the fault code information in time

With the function of Color/ B W, negative, high/low penetration, organic /inorganic stripping, general enhancement, and pseudo color, etc.

30 preceding images recallable.

Up to 10,00 images stored automatically.

The real-time curve can be used to detect whether the acquisition system and components work normally. System time can be set

It can realize the manual deletion of the low and low energy detection board dead pixels, and display the deleted dead pixels in the display area.

There are two source and analog source control modes, the source parameters of the digital source can be set.

The alarm function can be activated and deactivated, and the alarm type of the alarm box, sound and light alarm can be selected, and the sensitivity, minimum absorption rate, maximum absorption rate, and alarm duration can be set.

It can realize whether the components such as the entrance and exit light barrier, side panel switch, emergency stop switch and light source are normal, and display the standard value and current value of the detection voltage

The drum running control direction and the image display moving direction can be set.

It can realize software registration function and has serial number, registration code, registration status and system time information display.

Log in by entering different user name and passwords , only when logging in can you make other settings. You can add, delete, edit the user name and password , set the user level to restore the deleted user.

Different default permissions can be set according to user level.

The system language can be set to switch between Turkish and English.

User operations can be monitored to query user actions.

The version and device number can be displayed.

The report can be generated by the tip operation after the tip insertion function is turned on, and the content of the report: user name, number of tip insertions, number of tags, false positive rate, probability of detection, probability of false positives.

It can be set to enable and disable the insertion of dangerous goods, and can set the identification time, Prompt time, insertion frequency, proportion of single items inserted into dangerous goods, add tip files and delete files.

It can guery, open, and export the checked image.

It can set log level, save the file time, whether to open the training function and setting the smart roller. Display system working hours, the total working hours of the ray source, the total number of system baggage and packages, and the total number of baggage packages this time, and clear the above data.

It can select the exported data, pictures, and backup directory, select and adjust the motor type, detector type, whether to enable the debug mode, model, and gain, enter the corresponding IP address on network connection to realize sharing function, and have corresponding software to achieve system upgrade.

Compliance

- International
- National

- *ISO19001; SO14001; ISO27001; OHSMS18001; CE, ROHS, FCC, REACH, USA, FDA
- *Health Inspection Report
- *Computer Software Copyright Registration Certificate
- *Software Product Registration Certificate
- *Radiation Safety Certificate from Ministry of Public Security
- *Quality Certification from Safety and Police Electronic Products Quality Inspection Center
- *Design pantent certification.
